

# Think You Have Cancer?

## Early Detection Saves Lives

We use professionally trained Cancer Sniffing Dogs to detect cancer in the earliest stages when you have the highest chance of defeating it.

A dog's nose is more sensitive than current medical testing devices. They can alert you to signs of tumors long before doctors can detect them.

### 6 Reasons to Use Our Method

1. **Non-Invasive** – We use a swab sample from your skin
2. **Pain-Free** - No needles or scalpels
3. **No Doctor visit required** – Save time and money
4. **Discreet** – We mail the test kit and the results directly to you
5. **Highly Accurate** – Our dogs have over a 90% accuracy rate
6. **Low Cost** – Only 60€

If you're concerned that you or a loved one may be at risk of having cancer, Docs and Paws Oy offers convenient, economical, and private testing.
